

A yard in the middle of your map

1655 Cottondale Drive, Baton Rouge 70815 - fenced yard storage for Scag Scares

For Charlie Mascagni, Scag Scares LLC - from Ned Pearson - September 2026

2,000-3,000 sq ft of yard storage for the trailer, skid steer, mini excavator and material bins, priced to make the decision easy.

Why this yard: it is inside every drive you make

4.0 mi

to the center of 70808, your target ZIP - every job in the sweet spot is a short hop

1.8 mi

to Home Depot Tool Rental on Coursey - the one yard in town with live rental rates and on-hand counts

1 road

Florida Blvd, Airline Hwy and I-12 are minutes away: Denham Springs, Central, Prairieville and Port Allen are each one road

2,500 sq ft

fenced, gated yard storage - room for the trailer, skid steer, mini-ex and gravel/pipe bins; scalable to 3,000+ for Crew 2

Destination	Miles from the yard	Why it matters
70808 (sweet-spot ZIP center)	4.0	Sweet-spot customers 50-75
Home Depot Tool Rental #0357, Coursey	1.8	Rentals, pipe, fittings, bagged material
Denham Springs	8.3	East side of the 20-mile circle
Central	8.5	North side; Crew 2 territory
Port Allen	7.7	West side across the river
Prairieville	11.7	South side; Ascension growth
Zachary	15.2	Far north edge of the circle
Gonzales	16.8	Far south edge of the circle

Distances are straight-line from the yard's geocoded location (OpenStreetMap). Every point in Charlie's 20-mile circle around 70808 is within about 17 miles of this gate; the sweet spot itself is about 6. Less windshield time per linear foot is the second productivity lever in the growth plan - and it starts with where the truck sleeps.

What a central yard is worth to Scag Scares

Materials by the truckload instead of by the bag

A 100 LF French drain takes about 8-10 cubic yards of #57 washed gravel. From Rokrunner a 15-ton truckload delivered is about \$800 (live in the app), roughly \$53 a ton. Bagged at a big-box store the same stone runs several times that per ton, and every bag is a store stop. With bins in the yard, gravel and pipe are bought by the load, staged once, and loaded the night before. Conservative saving: **\$150-300 per drainage job** in material and one store run (1-2 crew hours) per job. At two crews and ~18 drain jobs a month that is on the order of **\$3,000-5,000 a month** - more than the rent.

Equipment that is where the crews are

- Trailer, skid steer and mini-ex parked at the yard, not at a house: crews meet at the gate, load off the readiness list in the app, and leave together. Both crews, from month 1, get the same gate and the same bins.
- Fenced, gated, lit: equipment insurance underwriters like it, and the app's QR tags on each machine make check-out and check-in a two-second scan.
- The jetter and the Drain Check plan: fill water, stage the reel, run 4-5 visits a day from a central point. The recurring book gets a home.
- Room to grow without moving again: 3,000+ sq ft available for a third and fourth crew as the plan proves out; a corner for a desk if Charlie wants one.

Cash

The yard line in the proforma is a yellow cell (Overhead: 'Yard / shop rent - 1655 Cottondale Dr'). At the introductory rate below it is about 3-4% of month-3 revenue and is covered by the material savings alone. Charlie can flip it on and see the 24-month effect in one keystroke.

The deal: priced to get in the door

Option	Rate	Monthly (2,500 sq ft)	12-month cost	Savings vs. market	Notes
Market rate (reference)	\$1.19 / sq ft	\$2,975	\$35,700	-	Going rate for yard storage at this location
A. Introductory - recommended	\$0.85 / sq ft year 1, \$1.05 year 2, market after	\$2,125 then \$2,625	\$25,500	\$10,200 in year 1; \$4,200 in year 2	Two-year term, month-to-month after; no deposit; 30 days' notice either way in year 1
B. Ramp-in	Free 60 days, then \$0.95 / sq ft	\$0 x 2, then \$2,375	\$23,750	\$11,950	Lets Charlie move in before the first rain campaign; 12-month term
C. Growth-linked	\$0.99 / sq ft, minus a \$250 credit each month Scag Scapes Command is in use	\$2,225	\$26,700	\$9,000	Ties the yard to the software relationship; credit stops if the engagement stops
D. Growth clause (add to any option)	Extra 500-1,000 sq ft at the same rate when a third or fourth crew is added	+\$425 to +\$850	-	-	No renegotiation when the next crew's equipment arrives

Why Option A

- A real number: \$2,125 a month versus \$2,975 at market - about \$10,200 saved in year one, with the rate stepping toward market only as the business grows into the space and the yard is earning its keep.
- Terms that make it safe for both: written month-to-month after the initial term; Charlie's insurance names the property; equipment stays Charlie's; a shared gate code and camera; no subletting; 30 days to cure anything either side gets wrong.
- Included: gate access 24/7, lighting, water for the jetter, space for two material bins, trailer parking, one visitor space. Not included: power beyond a shared outlet, indoor storage, office (available separately if wanted).

One sentence for Charlie: 2,500 square feet in the middle of his map for \$2,125 a month, no deposit, two years, and it pays for itself in gravel.

How it happens

When	Step	Who
This week	Walk the yard together; mark the 2,500 sq ft; confirm gate, lighting, water and bin locations	Ned + Charlie
Week 2	One-page lease (term, rate, step-ups, insurance, notice); certificate of insurance from Charlie's carrier naming the property	Ned drafts; Charlie's agent
Week 2-3	Move the trailer, skid steer and mini-ex; QR tags on each machine; first truckload of #57 into the bin (ordered through the app)	Charlie's crew; Ned sets up the app
Month 1	Crews start loading off the readiness list at the gate; first Monday readout includes windshield time and material cost per job	Both
Month 7	Crew 2 arrives; Crew 2 clause kicks in for the extra footage	Both

Ned's notes - remove this page before printing for Charlie

- **What the discount buys.** Option A gives up \$10,200 in year one and \$4,200 in year two against market. In exchange: a tenant on the property every morning, trucks and reviews carrying the address, and a growth plan that is physically built around Ned's yard and runs on Ned's software. The rent is the relationship; the software and growth engagement are the business.
- **Lead with A, hold B and C in reserve.** If Charlie hesitates on price, offer B (free 60 days) - the same first-year cost as A within a few hundred dollars but it feels like a gift and gets him moved in before the first rain campaign. Use C only if the software engagement is already agreed; it makes the two contracts reinforce each other.
- **Never go below \$0.79/sq ft.** Below that the yard reads as free and the step-up to market later becomes a fight. The floor is about \$1,975/month for 2,500 sq ft.
- **Step-ups are the protection.** Year 2 at \$1.05 and market after; if the engagement ends early, rent goes to market on 60 days' notice (write it in). That keeps the discount tied to the relationship without a non-compete or anything that sours the room.
- **Anchor with the gravel math, not the rent.** \$150-300 saved per drainage job by buying truckloads into a bin is a number Charlie can check on his next job; it makes \$2,125 a month look small before price is ever discussed.
- **Crew 2 clause is the upsell.** Same rate for the extra 500-1,000 sq ft when the second set of equipment arrives; no renegotiation. It is also the natural moment to move year-2 pricing up.
- **Paperwork that keeps it clean:** one-page lease; certificate of insurance naming the property; equipment stays Charlie's; shared gate code + camera; 30-day cure; no subletting. Have your own insurance agent confirm the yard's liability coverage for a tenant's equipment before the walk-through.
