

Scag Scapes Owns the Rain

How I help you win more jobs, keep more of each one, and waste fewer hours getting there.

For Charlie Mascagni, Scag Scapes LLC

From Ned Pearson · Baton Rouge · September 2026

Everything in here is built and running today at scagscapes.bridgebox.ai.

Every number has a source; the money model uses your figures, not mine.

The demand is guaranteed. The capture is not.

60.65"

of rain a year in Baton Rouge, about double the U.S. average
(usclimatedata.com)

0 of 7

competitors publish a price, book online, promise a response time, or map elevation (verified 9/15/2026)

27%

of home-services calls go unanswered; 85% of those callers never call back
(Higrovi 2026, Hicira)

May 8, 2026 - flash flooding closed about 13 EBR roads (WAFB). **May 10** - a homeowner with 6-7 years of backyard flooding and 7+ unanswered 311 complaints (WAFB). **August** - EBR has \$150M+ of drainage projects waiting on FEMA (WBRZ). The parish is years out. Private drainage is this week.

Responding within 5 minutes makes a lead 21x more likely to qualify than at 30 minutes. A one-man company cannot do that from a trench. Software can.

The homeowner in a wet yard calls three companies. Whoever texts back first with a price and an open Tuesday gets the job. Today nobody in this market does that.

Seven competitors, eight voids, none closed

Company	Base	Price shown	Online booking	Response promise	Drainage warranty (terms)	Elevation mapping	Rain-day response
Scag Scapes + Command	Baton Rouge	\$25-60/LF	Yes	60 seconds	1 year	Moasure 3D	Yes
Big Easy Drainage	New Orleans	No	No (a form)	No	Badge, no terms	No	No
TurnKey Drainage	New Orleans	No	No (a form)	No	No	No	No
Mowmentum Grounds	Denham Springs	No	No	"often same day"	No	No	No
Flora Landscape	Baton Rouge	No	No (call first)	No	No	No	No
WCK Foundation Repair	Denham Springs	No	No	No	Piers only	No	No
LaGreen Landscape	Baton Rouge	No	No (call only)	No	No	No	No
Hernandez Lawnscape	Baton Rouge	No	No	24/7 claim	"100%", no term	No	Claims

Two of the seven are New Orleans firms using Baton Rouge as an SEO page. You already map elevation with a Moasure - you just never told anyone. The app carries a bid playbook with the counter to each one of these companies, so whoever writes the quote sees it.

What is already built and running on your name

SALES IN MINUTES

Missed call or web form gets a text-back in 60 seconds with your price range and two open estimate slots. Homeowner replies 'Tuesday' - booked. Same-day quote with the Moasure map and warranty printed on it. Deposit by text, review ask after payment, 11-month warranty walk that asks for the referral.

SOURCING FROM THE JOB SITE

Home Depot rental rates and on-hand counts live (Coursey, Denham Springs); Sunbelt/United/Herc quote requests by text; Rokrunner aggregate prices live; fuel averages plus crew-reported stations; price alerts.

JOB READINESS GATE

Sold job becomes a full list: pipe with waste factor, gravel, fabric, basins, tools, mini-ex, PPE, LA 811 ticket, haul-off - matched to your yard and fleet. Red/yellow/green before the truck leaves.

RAIN TRIGGER

NWS forecast over 1.5 inches fires a pre-rain campaign to stalled quotes and a post-rain campaign to past customers' neighbors, with slots held for the morning after.

BREAKDOWN TO BACK-TO-WORK

Crew scans the machine's QR, taps symptoms, snaps photos (stored privately), works offline. Nine recovery options ranked on return-to-work time and total cost including crew downtime. Tells the crew whether to reserve, book, or call - with a script. Over your limit, it asks you first.

MARGIN YOU CAN SEE

Loaded labor rates, estimate versions, and exactly what a 5% discount does to margin before you give it. Customer sees what is included, never your cost.

Every price carries a label: LIVE VERIFIED, PROVIDER POSTED, CALL TO CONFIRM, ESTIMATED, STALE or CONNECTION ERROR. Nothing is shown as live unless a provider system or a person confirmed it. 16 automated tests, security review clean.

Where the hours and dollars stop leaking

Activity	Today	With Command	Saved (est.)
Answering and chasing leads	Voicemail from the trench; call back at night; 27% never reached	Text-back in 60 s; slot booked by the customer	4-6 hrs/week of Charlie's evenings; 85% of missed leads no longer lost
Quoting	Measure, drive home, type, email next day	Measure numbers in, PDF out on site the same day	1 hr per quote; quotes out 1-2 days sooner
Buying materials and rentals	Call two yards, take the first price	Live comparison of price, on-hand and distance; quote requests by text	15-30% on rentals; 45 min per job in phone calls
A machine breaks	Lose the day finding a mechanic or a rental	Ranked options with phone script in 2 minutes	6 hrs of crew time per incident (2 crew x \$135/hr crew cost = \$810)
Loading the truck	Memory; a forgotten fitting = a store run	Readiness list from the quote, checked before departure	1 store run per job (1-2 hrs)
Getting paid and reviewed	Invoice later, ask for a review sometimes	Deposit and balance by text; review ask automatic	Cash 3-7 days sooner; a review on every job

What it is worth, with the assumptions in the open

Assumptions: 12 inbound calls/forms a week, 27% missed today, \$5,100 average drain job, 35% close rate, 45% gross margin, 6 breakdowns a year, 14 rain events a year. Only four levers the system directly changes are counted; upsells, price increases and commercial work are not.

Lever	Per year
Missed leads recovered and won (143 leads x 35%)	50 jobs · \$255,000
Rain-triggered jobs (14 events x 1 estimate x 35%)	5 jobs · \$25,000
Referral and review flywheel (1 job a month)	12 jobs · \$61,000
Breakdown downtime avoided (6 x 6 hrs x \$135)	\$4,900
Added revenue	about \$342,000
Added gross profit at 45% margin	about \$159,000, and a company that runs without your phone

This is a model, not a promise. The number that matters is the one the dashboard shows on day 90.

How we start, and how you stay in control

When	What happens
Week 1	Real phone number, deposit links and review link switched on. Price range and the 60-second promise published. Every call from this point is answered.
Weeks 2-4	Every quote runs through Command with the Moasure survey attached. First rain event: campaigns fire; we count booked estimates per event.
Weeks 5-8	Crews on the field app: QR tags on the fleet, breakdown flow, readiness gate before every departure. Rentals and materials bought off the live comparison. First reviews on the site.
Weeks 9-12	Parish pages (Zachary, Central, Prairieville, Gonzales, Port Allen) with local install photos. Warranty-walk automation starts. We read the dashboard together and decide the next 90.

Your checkpoints

Day 30: everything above is live; 100% of inbound answered; speed-to-lead under 2 minutes.

Day 60: booked estimates from system-sourced leads and new Google reviews, both on the dashboard.

Day 90: revenue the system can prove it created, tagged job by job. Miss a checkpoint and you can stop with 14 days' notice. You keep the software, the data, the phone number and the reviews.

What I bring

The software, hosting and integrations. Twenty years running multi-location retail, in-home sales for a Baton Rouge home-improvement company, supply negotiation, and a local network of realtors, property managers and builders for the commercial channel. Terms of engagement to be agreed together after we run one real quote through the system.
